

At RedShield, we've made Web Application Protection a process instead of a product. That makes us an outcome-based service capable of providing 100% mitigation of known web application vulnerabilities.

Our unique approach, Shielding-with-a-Service, combines unparalleled, proprietary and patented shielding technology with world-class cybersecurity expertise working around the clock to protect your web applications. Our defense teams focus on your web application security protection so you can reallocate your precious security resources to other critical issues.

### **WHY REDSHIELD**

- Make 100% vulnerability mitigation a reality
- Meet launch deadlines regardless of code remediation complexity of known issues
- Quickly resolve PCI issues
- Extend the life of flawed critical, high-value legacy applications
- Shield vulnerabilities of 3rd-party apps and platforms

### **WHAT WE DO**

- Protect apps, platforms and frameworks without touching a single line of source code
- Protect app-directed traffic through the RedShield global shield network
- Conduct 24/7 threat analysis and leading edge exploitation research
- Publish real-time attack reporting and insights
- Address both technical flaws and business logic vulnerabilities

### **HOW WE DO IT**

- Proprietary 14,000+ shield library & ongoing custom shield development
- Continuous shields development, deployment and optimization
- Proprietary Shield-matching Intelligence Engine; RED BRAIN
- Proprietary vulnerability validation and shield correlation
- Exclusive vulnerability intelligence database
- Customer portal for access to our processes and world-class expertise
- Real-time application protection reporting

## **Shield First. Then Remediate.**
